

MyFlix-Client-React App

Objective

Using React, build the client-side for an application called myFlix based on its existing server-side code (REST API and database).

User stories

- As a user, I want to be able to access information on movies, directors, and genres so that I can learn more about movies I've watched or am interested in.
- As a user, I want to be able to create a profile so I can save data about my favorite movies.
- As a user, I want to be able to edit my personal information as well as deregister whenever I want.

Key features

- Your app should display a welcome view where users will be able to either log in or register an account.
- Upon clicking on "edit info", user has the capability to edit her personal info.
- Upon clicking on "delete account", the app deletes user account and user redirected to welcome page.
- User profile view displays a list of user favorite movies.
- Movie card in profile view has following additional features:
 - A button that when clicked removes the movie from user favorite list
- Once authenticated, the user should now view all movies.
- Upon clicking on a particular movie, users will be taken to a single movie view, where additional movie details will be displayed. The single movie view will contain the following additional features:
 - A button that when clicked takes a user to the director view, where details about the director of that particular movie will be displayed.
 - A button that when clicked takes a user to the genre view, where details about that particular genre of the movie will be displayed.
 - A button that add the movie to the user's movie favorite list
